-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Claim Rejections - 35 USC § 103

1. Claims 1-19,21-24,27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dahl et al (6,697,677) in view of Wang et al (5,462,545).

Figure 7 of Dahl is considered to show all of the features of the above claims except for the explicit mention of an extendable member that curls upon itself when in the deployed state. Wang teaches a electrode system where the electrode can coil. To use such a coiling electrode with the device of Dahl would have been obvious since such would be a simple substitution of prior art elements to form a combination that would yield a predictable result. Further, to use a plurality of extendable members would be obvious in order to stimulate a greater amount of tissue.

2. Claims 25,26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dahl et al (6,697,677) in view of Wang et al (5,462,545) and further in view of Giele et al (5,531,783).

Giele teaches a coating which dissolves in the body and which, before dissolving, helps retain the tines close to the lead body, see figure 1c. To use such a coating with the device of Dahl et al and Wang et al would have been obvious since such a coating would allow for the electrodes to be properly positioned before they coiled.

Since new rejections have been made, this action is not made final.
